452R
Radiation Survey Meter

Built to Withstand and Designed to Perform

The Fluke Biomedical 452R combines the trusted precision of the original 452 with a rugged new design that's built to meet the toughest industrial demands. With its enhanced durability, drop-tested certification, and an upgraded IP65 rating, the 452R is ready to tackle a broad range of applications, from non-destructive testing and contamination measurements to x-ray scanning and process control. Whether you're helping to ensure workplace safety, conducting critical inspections, or monitoring radiation, the Fluke Biomedical 452R delivers reliable, fast, and accurate results—no matter where the job takes you.

One device for every situation. Endless possibilities.

Technology

The measurement technology of the Fluke Biomedical 452R is based on a combination of a silicon sensor cluster and a Geiger-Müller pancake. The instrument has two interchangeable lids (depending on model) to switch between air kerma, ambient dose equivalent and counts. This design makes it a versatile instrument with a wide and flat energy response along with high sensitivity and quick response time.

Models

The 452R comes in three different models.

	R / Gy / rad	Sv / rem	cps / cpm

1. The instrument uses a Geiger-Müller pancake at low rates and a cluster of fully engaged gradually increases with temperature, for temperatures above 30 °C (86 °F).
2. Limit where the response is within ±20 % of the response at continuous radiation. Above 30 °C (86 °F) the instrument's ability to handle low linac pulse rates and short X-ray pulses gradually declines with increasing temperature.
3. Refers to the microwave pulse repetition frequency of typical medical linear accelerators. Each pulse has a typical duration of a few µs.
4. Ranges where the instrument fulfills IEC 60846-1:2009.
